

ITSS Workshop - Agentic AI for Software Engineering

Materials package, 28 May 2026

Welcome. Below is the complete set of materials from today's workshop. Read in order if this is your first pass; skip to the cheatsheet you need otherwise.

00_Workshop_Handout.pdf - the master reference. Read this first.

01_CLAUDE_AGENTS_md_Cheatsheet.pdf - how to write `CLAUDE.md` and `AGENTS.md` for your team's repos. Templates plus the sandbox JSON baseline you can paste into `.claude/settings.json`.

02_Kill_Signal_Decision_Card.pdf - the brownfield diagnostic: kill signals split into CODE (artifact missing - AI generates it first) and PEOPLE (conversation + mentorship; AI doesn't substitute) + traffic-light triage. Use before assigning any AI-heavy task on a repo you did not write.

03_MCP_Plugin_Supply_Chain_Checklist.pdf - pre-install vetting for any Claude Code plugin or MCP server. Apply before adding anything to dev machines.

04_Repo_Architecture_Mapping_Prompt.pdf - the take-home prompt from Demo 1. Paste into Claude Code on any repo to generate an interactive architecture HTML.

05_Documentation_Mindmap_Prompt.pdf - the take-home prompt for mapping a folder of Markdown docs into an index, mind map, and cross-linked notes.

demo-codex-architecture.html and **demo-opencode-architecture.html** - the architecture maps from Demo 1, generated on OpenAI Codex CLI and anomalyco/opencode. Links inside the HTML point to the presenter machine and are illustrative; the same prompt produces working `file://` links on the machine where it runs.

An earlier draft of this share included a separate `ailabs-arch-flows.zip` plugin. It was dropped during D-1 prep when the workshop pivoted to teaching marketplace-as-repo construction (Demo 1 Part 2). The take-home pattern is documented in the Participant Handout's "Build & Own Your Marketplace" section - you build it on your own machine; ITSS owns the resulting repo. Archived source preserved in the workshop repo for audit/reference, not as a take-home asset.

Questions / follow-up: mc@ai-labs.ro

Champion path: if you are considering championing your team's pilot, email Mihai by Friday 29 May with 5-6 lines: project, kill-signal verdict, and why it is a good candidate.
