

Manager Day-7 Worksheet

By Friday, June 5, 2026: pick one GREEN project + one champion.

This worksheet is for the manager track. Fill it in by Day 7 after the workshop (June 4) so the GREEN project + champion is locked by Friday June 5.

Project triage

Field	Project 1	Project 2	Project 3
Project name			
Kill-signal count	__ / 8	__ / 8	__ / 8
GREEN / YELLOW / RED			
Champion owner			
Week-1 action			

The kill signals — CODE and PEOPLE

The diagnostic question: **“Is what’s missing an artifact, or human knowledge?”**

- **CODE signals** (1, 3, 4, 5, 7, 8) — AI can produce the missing artifact (tests, dependency map, rule registry, lint hooks, domain README, migration tests).
- **PEOPLE signals** (2, 6) — only humans clear these: conversation with the senior, mentorship to grow evaluation skill.

Worksheet — Your Project’s Kill Signals (D-7)

For each kill signal you observe in your project, tag CODE or PEOPLE and name the next move.

#	Signal	Present (Y/N)	CODE or PEOPLE	Next move (AI pre-work / conversation / mentorship)
1	No Tests	___	CODE	___
2	No Documentation	___	PEOPLE	___
3	Tight Coupling	___	CODE	___
4	Complex Rules	___	CODE	___
5	Regulatory	___	CODE	___
6	Can’t Evaluate	___	PEOPLE	___
7	Model-Context	___	CODE	___
8	Velocity-of-Change	___	CODE	___

Count: __ total signals · __ CODE · __ PEOPLE · Traffic light: __

Manager’s Day-7 question: What single AI pre-work artifact (or PEOPLE conversation) clears the highest-leverage signal? Schedule it for Week 2.

Traffic light rule

- **GREEN — 0-1 signals:** AI-led. Full agentic workflow. First pilot lands here.
- **YELLOW — 2-3 signals:** AI-assisted. Count by category. CODE-heavy: AI pre-work plan. PEOPLE-heavy: hiring or mentorship plan.
- **RED — 4+ signals:** invest in codebase readiness BEFORE using AI. Re-classify in 6 weeks.

Week-1 action examples

- Skeleton `CLAUDE.md` committed to the GREEN project’s repo
- Champion runs the Demo 2 phase-based loop on one feature end-to-end
- Agent View / Claude Code installed for two devs on the GREEN team
- Kill-signal triage of all team projects written into the team’s roadmap doc

Day 30 / 60 / 90 leadership conversation

Day	What you tell the VP
30	GREEN project signed off; champion running phase-based loop weekly; first measurable delta (cycle time on small features)
60	Second project moved from YELLOW to GREEN via test-suite work; pilot delta measurable in PR-review-cycle metrics
90	Two GREEN projects; CLAUDE.md / AGENTS.md committed in three repos; team adoption rate target ≥ 50% of touched PRs use the phase-based methodology
