

ITSS Workshop - Agentic AI for Software Engineering

Materials package, 28 May 2026

Welcome. Below is the complete set of materials from today's workshop. Read in order if this is your first pass; skip to the cheatsheet you need otherwise.

00_Workshop_Handout.pdf - the master reference. Read this first.

01_CLAUDE_AGENTS_md_Cheatsheet.pdf - how to write CLAUDE.md and AGENTS.md for your team's repos. Templates plus the sandbox JSON baseline you can paste into .claude/settings.json.

02_Kill_Signal_Decision_Card.pdf - the 6-signal brownfield diagnostic: when not to use AI on a legacy codebase. Use before assigning any AI-heavy task on a repo you did not write.

03_MCP_Plugin_Supply_Chain_Checklist.pdf - pre-install vetting for any Claude Code plugin or MCP server. Apply before adding anything to dev machines.

04_Repo_Architecture_Mapping_Prompt.pdf - the take-home prompt from Demo 1. Paste into Claude Code on any repo to generate an interactive architecture HTML.

05_Documentation_Mindmap_Prompt.pdf - the take-home prompt for mapping a folder of Markdown docs into an index, mind map, and cross-linked notes.

demo-codex-architecture.html and demo-opencode-architecture.html - the architecture maps from Demo 1, generated on OpenAI Codex CLI and anomalyco/opencode. Links inside the HTML point to the presenter machine and are illustrative; the same prompt produces working file:// links on the machine where it runs.

ailabs-arch-flows.zip - optional AI Labs bonus plugin referenced in the handout. Claude Code v2.1.128+ can load it directly with `claude --plugin-dir /path/to/ailabs-arch-flows.zip`; otherwise unzip it and run `claude --plugin-dir ./ailabs-arch-flows`.

Questions / follow-up: mc@ai-labs.ro

Champion path: if you are considering championing your team's pilot, email Mihai by Friday 29 May with 5-6 lines: project, kill-signal verdict, and why it is a good candidate.
